

NAMA : AURORA IHRISH KHOLISHOH

KELAS : TI.24.CA.1

NIM : 312410037

MATKUL : WEB PROGRAMMING

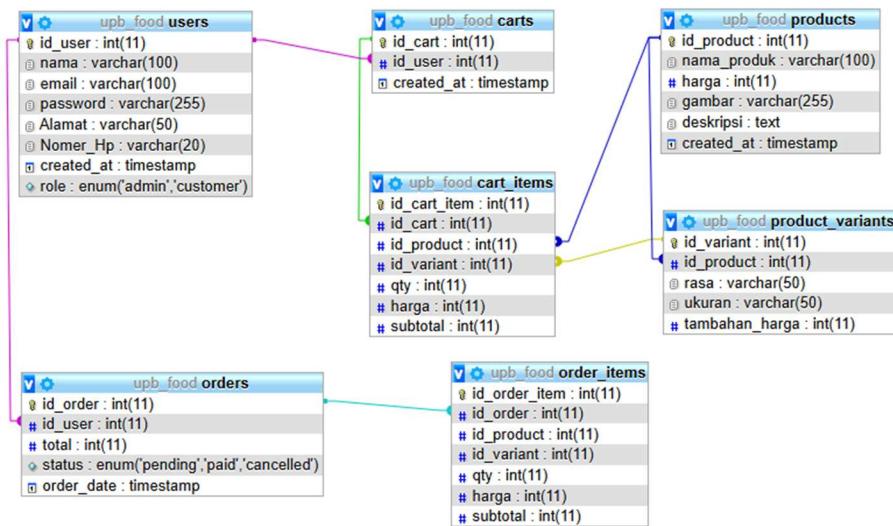

## TUGAS PERTEMUAN KE 14

### 1. NAMA DATABASE : upb\_food

### 2. CARA EXPORT DATABASE DI PHPMYADMIN :

- Export dari phpMyAdmin → pilih SQL → Kirim → save sebagai upb\_food.sql.
- Pastikan foreign key dan auto\_increment sudah sesuai (dari script yang kamu lampirkan, sudah lengkap).

### 3. RELASI DATABASE :

### PENJELASAN :

1. `users.id_user` → `carts.id_user` (1:N)
2. `users.id_user` → `orders.id_user` (1:N)
3. `carts.id_cart` → `cart_items.id_cart` (1:N)
4. `products.id_product` → `product_variants.id_product` (1:N)
5. `products.id_product` → `cart_items.id_product` (1:N)
6. `product_variants.id_variant` → `cart_items.id_variant` (1:N)
7. `orders.id_order` → `order_items.id_order` (1:N)

8. products.id\_product → order\_items.id\_product (1:N)
9. product\_variants.id\_variant → order\_items.id\_variant (1:N)

#### **KETERANGAN**

- PK = Primary Key
- FK = Foreign Key
- 1:N → Satu record di tabel parent dapat memiliki banyak record di tabel child
